**Michael Bir**

PRINCIPAL SOFTWARE ENGINEER | Reports to: I.M. Ndimubanzi

## Connect Jan 2026

Reflection Period: Apr 26, 2025 - Jan 16, 2026

Impact is **what** you accomplish - and **how** you do it matters just as much.

### WHAT

What results have you delivered for your goals, keeping security, quality, and AI in mind?

### HOW

How have your behaviors and actions led you, your team and Microsoft to excel, grow, and build trust?

## Reflect on the past

What results did you deliver, and how did you do it?

### What & How

#### Product Delivery

- Defined the architecture for OneSpace and the migration plan for shifting from MSSpace to Tririga. Also aligned data strategies across stakeholder teams by partnering with DWI, DIP, and Space teams to collaborate on architecture and business requirements.

- Delivered an entirely new HybridAI Maps SDK that comes with a plethora of configuration options, completely extensible, has baked in telemetry, performance metrics, overridable style defaults, extensive examples, code snippets and high test coverage. Using our HybridAI Maps API and my deep understanding of web map rendering technologies I implemented this SDK built on top of Maplibre's open source library. It uses our HybridAI Maps API to retrieve relevant geojson and the Digital Integration Platform's APIs to enhance spatial information with their space metadata. We exposed key map types for various scenarios like the Exploration Map for world-level map searching/interaction, the Building Map type for loading specific building floorplans and the Basic Map type (which the Building and Exploration one are built on top of) for a build-your-own map to enable a variety of scenarios.
- Implemented and fixed a variety of features and/or feature improvements for our Seating Chart Simulator through a combination of personal contribution and leveraging vendor resources, including proper role enforcement for Move Owners and Collaborators, Map drag and drop capabilities for employees, team relocation/swapping, new sync jobs and APIs to support the storing and retrieving of crucial employee hierarchical data and more.
- Implemented a new framework I've dubbed the Externals API or Externals Framework which provides an elegant solution to tracking proper setup/configuration/connection to external sources/APIs for a given service/component by providing an intelligent system where developers can register external resources for tracking and provide a variety of configurations to define what a positive connection means to them. It also comes with some level of auto-discovery for common connections like Azure Storage and Azure SQL. It additionally auto-injects and http route for monitoring the status of said external connections.

#### Product Feedback

- I've begun a new partnership with the Aspire product team. Providing feedback and sharing our development story/experiences to help guide the future of .NET Aspire. I've also started migrating our first repo to a .NET Aspire application to serve as future sample for other teams in our org to understand how to implement it practically and particularly how to weave in resource types not supported by .NET Aspire (yet).

#### Engineering Excellence

- I fixed a variety of bugs for SCS and Hybrid AI Maps to prepare for our official launch, including but not limited to:
  - Employee placements not showing on the correct floor
  - Front door routing improperly configured
  - Flighting bugs and misconfiguration
  - Stepper components not disposing of state properly
  - Cluster zoom-in zooming in to cluster node instead of leaf node boundary
- I helped implement and fix NSP configuration issues to adhere to the new PaaS Resources SFI requirement.
- I created dashboards for monitoring HybridAI Maps usage & performance.
- Fixed multiple performance issues in SCS
  - Reduced seating chart generation times by 90% (10x faster) through proper parallelization and deep Durable Function technical understanding
  - Reduced user validation in move creation by 85% by utilizing proper MS Graph request batching techniques.

#### Cross-Team Impact

- Updated a variety of library packages owned by DIP (but used across the org) to use the latest LTS and & STS versions of .NET
- Shared our architectural plans and migration plans in ACF for guidance and awareness to ensure teams understand the upcoming changes with regards to our shift from MSSpace to Tririga and get early feedback on our plans.

## Impact

- I positioned OneSpace for future integration, long-term growth, and future-proofing potential future shifts to an alternate IWMS for smoother integration with Microsoft internal systems.
- I delivered objectively the most intuitive and flexible Map SDK available internally for rendering Microsoft Floorplans enabling teams to enhance their internal services with floorplan aware capabilities (like showing where various WIFI access points are in a building for maintenance). We already have one team who has successfully deployed a production service using our maps SDK in a dynamics 365 application. Our guides and documentation made onboarding incredibly simple and quick.
- Through my personal contributions, mentorship and guidance in implementing our SCS and HybridAI Maps features we delivered on our feature items for each phase for the Moves Admins leading to extremely positive feedback and saving admins 100's of hours in manual floorplan desk assignments.
- My new externals API has attributed to service resiliency and improved the developer experience by improving troubleshooting of connections with external systems/services allowing engineers to focus more on feature delivery.
- Through my mentorship and guidance our vendors have been able to deliver on a variety of features for SpaceHub and HybridAI Maps expanding their knowledge and ability to contribute more with greater quality and efficiency going forward.

## Reflect on recent setbacks - what did you learn and how did you grow?

There were a few features where we had some disconnect between what our PM expected and what we delivered; however, we quickly iterated on the implementation and mapped out a plan to avoid the disconnect by having our PM come up with some more concrete mock ups prior to implementation so we can discuss them practically before implementation. This led to less iterations on future features. This taught me to make less assumptions and ensure clarity on design and implementation to match consumer requirements/usage.

## Manager comments

### THE CONTEXT

This last period you have worked on the Space Management (SPM) program within Microsoft Digital Workplace (DW) group. SPM manages real estate and facility data for Microsoft. More specifically, you have worked on developing Hybrid AI Maps SDK. You have contributed to the AI moves Tool to help Microsoft Real Estate operation Team with the upcoming RTO. And lastly you have focused on the One Space platform aiming to integrate the new IWMS into the Microsoft space ecosystem.

### THE WHAT & THE HOW

First and foremost, congratulation on your promotion to Principal SWE.

You have had an impactful semester as you have consistently delivered with speed and urgency against expectations.

I'd like to call out the following:

### Product Delivery & Technical Innovation

Your strategic oversight in architecting OneSpace and leading the migration from MSSpace to Tririga, as well as positioning OneSpace for integration and growth, exemplifies a proactive approach and strong vision. Delivering

robust solutions such as the HybridAI Maps SDK and the Externals API framework demonstrates technical acumen and a focus on scalability and reliability. Your work on the Seating Chart Simulator and guiding vendors on SpaceHub and HybridAI Maps has expanded capabilities and improved quality.

**To Do:** Continue fostering cross-team partnerships, mentoring others in feature development, and empowering vendors with clear standards. Expand enablement materials, integrate customer feedback loops, and share best practices to drive continuous improvement and operational excellence.

### **Product Feedback & Organizational Learning**

Your collaboration with the Aspire product team and migration of repositories highlights leadership in driving organizational learning and technical evolution.

**To Do:** Facilitate cross-team knowledge sharing and advocate for broader adoption of emerging technologies to amplify your influence.

### **Engineering Excellence & Quality Assurance**

Resolving critical bugs, preparing products for launch, and addressing compliance issues such as NSP configuration for PaaS Resources SFI demonstrate attention to detail and commitment to quality and standards. Creating usage and performance dashboards for HybridAI Maps reflects a data-driven approach to product stewardship.

**To Do:** Institutionalize learnings by developing reusable solutions, guiding peers through complex launches, and expanding dashboard capabilities to enable predictive analytics and actionable insights.

### **Cross-Team Impact & Collaboration**

Updating DIP library packages to the latest .NET versions and sharing architectural and migration plans in ACF reinforce technical alignment, transparency, and collaborative planning.

**To Do:** Engage stakeholders in regular review cycles, solicit early feedback, and facilitate open forums for strategic discussion to ensure sustained compatibility and drive alignment.

### **Mentorship & Influence**

Your mentorship and direct contributions have driven efficiency and positive feedback from Moves Admins.

**To Do:** Scale your impact by developing structured mentorship programs and sharing insights across teams.

### **REFLECTION ON SETBACKS**

Thank you for your insightful reflection.

Going forward, let's prioritize clear design agreements upfront—using concrete mock-ups, user flows, and shared understanding of expected behaviors—before implementation begins. This will reduce iterations, avoid rework, and ensure we're building exactly what the customer needs. With tighter communication loops and stronger partnership with PM, we'll deliver upcoming features/deliverables more smoothly and predictably.

## **Plan for the future**

## What are your goals for the upcoming period?

### Auto Assigned

#### Goal #1. Compliance

Personally, commit to generate and protect Microsoft trust by living Microsoft's values, culture, and Trust Code in every decision.

##### All Roles:

- Integrity & ethical behaviors modeled every day. Full adherence to Company policies and processes. 100% of mandatory Compliance Trainings completed timely.
- Cooperation and help on remediation actions with audits, investigations and other compliance processes & controls. Proactive identification of risks inherent to the role and timely escalation of concerns.

##### All Leaders & Managers (Additional CIS):

- Healthy team culture in which employees feel recognized for making ethical choices and share concerns. Consistent advocacy for the importance of advancing a culture of compliance. Team's adherence to policies & processes and timely completion of mandatory compliance trainings. Active support for controls, review processes and investigations through effective remediation of control failures. Connects are leveraged to document impact and improvement areas.

#### Goal #2. Project Delivery

- SpaceHub
  - I'll be focusing primarily on the Seating Chart Simulator feature improvements and any bug fixes that arise.
- SpaceHub vNext (OneSpace)
  - Now that the core plans are in progress, I'll mostly be consulting as needed for OneSpace on architectural decisions leveraging other senior engineers in our team and others for implementation.
- Hybrid AI Maps
  - I'll also back-off to mostly consulting and guidance for maps as implementation, feature improvement and bug fixes will be lead by other junior engineers on our team.

#### Goal #3. Product Feedback

- Continue partnership with .NET Aspire product group in adopting features at various maturity levels, provide critical feedback and contribute with potential features/ideas.
- Track if suggestions/bug fixes make it into Production

#### Goal #4. Engineering Excellence

- Ensure Zero code bugs in production that cause high severity incidents (Sev3 or higher) for Space
- Define, measure and track SLA/SLO for all our services and components.
- Establish timely communication and mitigation for any IcM incident or planned maintenance.
- Track and improve DRI and compliance related work through ADO.
- Automate everything tests, deployments repetitive process.
- Live site in Digital Workplace
- Drive and maintain Live Site culture in Digital Workplace
- Educate and make sure DW services have healthy Service Health and Live Site metrics.
- Maintain >95% (average) Service Health Compliance across all DW core services, annually
- Ensure 99% S360 compliance

#### Goal #5. Cross-Team Impact

- I plan to startup either a montly or quarterly newsletter of sorts to pass down knowledge and learnings across the org beyond the scope of WWWOW and ACF, which I plan to also invest more in. The goal will be to provide smaller chunks of learnings to hopefully a wider audience on a schedule that's not bounded by meeting attendance.
- I will aim to garner feedback and observe if/when teams change code/processes to align with things I've shared/presented on.
- Share my upcoming implementation of .NET Aspire into one of our repos with our org and share my learnings
- Create an official library for my Externals API and publish it for other teams to consume and use and track adoption to measure impact.

### How will your actions and behaviors help you reach your goals?

With a growth mindset, a passion for solving problems and my plan to extend my reach across the org, I'm confident I will make lasting impacts across teams to accelerate their developer experiences and their ability to deliver on their own goals.

## Manager comments

### Team Shared Priorities & Commitments

- Security is and remains our first core priority. All services we build have to adhere to the highest standard of security as prescribed by SFI.
- In an AI-first environment, routine and low-value tasks—such as managing SFI items or features not needing complex integration should be delegated to intelligent agents.
- Engineering Hygiene: ADO should serve as the single source of up-to-date information, providing visibility across all engineering activities. We should maintain a dashboard with important metrics like team backlog, velocity, deployment rate, high priority / severity issues. Every item should have defined acceptance criteria, story points, and proper status reflecting the state of the work.
- Evaluate open-source opportunities.

### Upcoming Projects

- Moves Tool post MVP features such as multiple building moves, workpoint support, conflict detection (space and people), etc.
- IWMS Migration from MSSpace to IBM Tririga via the One Space Platform and accelerating data flow across Microsoft services and applications.
- Hybrid AI Maps: Transition to Tririga standard, enabling versioning, broader support for MEP layers, etc.

### Growth and Development.

As now a principal SWE, your impact in some sense shifts from execution to multiplication. You are now fully in a engineering leadership position.

More than ever, you have to build consensus across teams or even organizations, communicate trade-offs to leaderships and make technical decisions stick through persuasion, not position. Engineering leadership is not about being the best developer in the room. It's about making the room better at coding. Writing code yourself is faster. Teacher others to write it scales. But the transition is not natural. Let's continue this discussion during our 1:1.
